You need to contact technical support to arrange for repair. You need to powercycle the unit to after changing DIP switch settings. If your friend have XP and you have different operation system Warranty gone. So I assume the fuse is fine BUT I am no expert. Second test the power board.

The board has an 8 pin cable connector to the main board as follows But from online research I was really expecting that the STB GND to read either 5 V or 3.3 V. So I basically stumped right now as to what is wrong. I would appreciate any help in diagnosing what the next step might be or what is wrong. Do I need to replace the power board or is it something else. The TV has power but obviously does not work so something must be broken. Sorry for being so long winded but I thought the more that I tell you might help. Thanking you all in advance. The sound is there, but, no picture, nor the TV light is on. Problem occurs on all inputs and settings Tuner, HDMI, WEB site, Comp, etc. The light on the front is off is solid red. If I press the button power on the tv the red light goes away and the tv does nothing. A minute later the red light goes on solid again. I tried all the resets as told by the internet, without luck. Can you offer ant advice thanks Answer questions, earn points and help others. We delete comments that violate our policy, which we encourage you to read. Register a free business account Full content visible, double tap to read brief content. Please try your search again later. Easily convert SVideo and Composite Analog Video sources to DV and back again. In addition to using Canopus awardwinning DV codec technology, the ADVC100 supports locked audio, works with NTSC and PAL video, and is compatible with both Windows and Mac OS. The converted DV streams are transferred to your PC or Mac via IEEE 1394 i.Link, FireWire and stored on your hard drive where they can be manipulated using your favorite photo or video editing applications. This device is ideal for all OHCI and DV only capture cards for Macintosh or PC. Proven DV CODEC Technology At the heart of ADVC100 is Canopus proprietary DV codec chip providing the industry's best picture quality preservation during analog to DV and DV to analog conversion. The ADVC100 is the first inexpensive DV converter that supports locked audio when converting from analog to digital, assuring perfect audio and video synchronization. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later.

Researching a simple yet effective means to do so was a quite the task; it seems for every good review I would read of the devices that plugged into your computer via USB was another one said the device sucked; basically it seemed to be a crap shoot. It seems so obscure among the general consumer that if you are reading this review I am guessing you either know or discovered this yourself. The most common model I found people using was the ADVC110. This model, the ADVC100 is an earlier model with a separate power supply; the 110 gets its power from the Firewire connection and has an option for a power supply. This model also has an extra Audio connection the 110 apparently lacks. This particular one I bought was lightly used in box, came with probably everything that it originally shipped with all nicely tucked and packed in the original box. NOTES There are little switches on the bottom of the device; it will work for NTSC or PAL pay particular attention to which of the NTSC selections you choose; there are two. This is not a USB device. The older USB 2.0 standard is much slower than Firewire; which is probably why people have less trouble with dropouts when using this device. The only time I have had drop outs was because of a damaged tape or a burp in the camcorder. If you are using a PC desktop computer you often can just add a Firewire card to your computer; PC laptops can be a bit more tricky, but if you have an enterprise class computer, made for businesses, and it has a PCMCIA card slot, you can find Firewire adapters here on Amazon that will fit in there and then use that. Also know that just because you are taking your old analog videos and putting them into a digital format you can not

expect them to now be high definition; they can only be as good as the original source material; and their imperfections can really show up on a high definition screen.

Now that I have been getting these old tapes onto my computer I am having fun editing them; I am using Sony Movie Studio Platinum Suite 12 which has a little learning curve but is not difficult to use and has a huge fan base with a ton of support videos on the internet. As of this writing Version 13 is now out and you can get V12 for a steal. Have a Magical Day! It was really well maintained and had no signs of scratches. The video signal appeared on my laptop. No need of settings and head scratching. Just plug and play. I recorded a video of about 130 hours and did it all at once without signal dropping. Very happy! Most users had difficulties capturing analog to MPEG2 for burning onto DVD. Don't let yourself be scared off. Fear mongers stating that the converter captures DV files which then have to be converted to MPEG2 aren't using the right interface software. The ADVC100 is a stand alone external unit without a software suite of its own and relies on whatever captures software you choose. I could just be lucky but both My WinProducer and my Nero Burning software detect the device instantly and allow choices of AVI, DV or MPEG2 format for file capture. Granted, having an external device may not be as convenient as a VIVO internal card, but compared to other external capture boxes the ADVC100 is tiny and unobtrusive. Better yet, its IEEE Firewire compliant as opposed to the 1.0 and 2.0 USB connections that for the most part fall short with frame droppings and missynced audio during capture. If you're looking for a straight forward plug and play unit this is it. Just make sure that you have a capture card with Firewire input capabilities such as the Sound Blaster Audigy series before purchasing this product. I had to get an adapter last year 2014 for it to plug into the new Firewire port and it continues to provide video conversion heaven! Either knew it didn't work or didn't care.

I simply took it out of the package which I received in less than 24 hours with free shipping from Amazon.com and plugged in the cables and went with it. It connected to Movie Maker 2 and I was off. I definitely recommend this to anyone looking to put old vhs movies onto DVDs for safe storage. It works perfect with fire wire on older Mac Pro desktop. The DV Bridge would not sync the audio with the video but this unit does. Also much more stable. Great product.
