One feature of this particular model is the ability to add a Secure Memory card in a recepticle located on the top of the iPAC. I listen to mp3s that I download a great deal of the time so the extra memory I use 256MB cards is a necessity, as the internal memory will only hold half a dozen songs. With a 256MB memory card you can have much more than a CDs worth of tunes right in the iPAC, add a good set of ear phones and youve got great sound along with everything else the iPAC offers. I usually take two or three loaded memory cards with me so I have a huge variety of tunes to fit any mood. Never having used a PDA before, I dont know how the Note Pad function compares, but the one on this model works wonderfully in all three modes.I know that there are newer models which probably work just as will but dont think they have the memory expansion capability built into the naked unit I could be wrong about that. The ability to have all the expanded memory you want in the naked iPAC is worth choosing this model, all else being equal.I was constantly forgetting about meetings and appointments, and had resorted to using MSN to keep track. While MSN is a good PIM, it just isnt fully featured enough for me. The iPAQ is not just a PIM personal info manager though, it can play MP3s, let you compose Word documents, take voice commands, write emails, and much much more. The Pocket 2002 OS is awesome as well. Looks a bit like a mix of Windows XP and Windows 3.1 for the good, I promise. Ive been downloading a lot of games from places like handango.com and pocketgear.com. The 206mhz processor and ample RAM makes multimedia apps run darn smooth. If youre a developer type, Microsoft has eMbedded Tools out for download over at pocketpc.com Ive been tinkering with eMbedded VB. While not too powerful of a language its more akin to VBScript, its highly simplistic. To sum it up get one. Get one now.

The best features of the iPaq 3835 are its new crystal clear display the 65,000 colours helps a lot in this department and Microsofts Pocket PC 2002 is such a step up from the previous Windows CE operating system. As ever connecting to a PC and syncronizing files is extremely easy with the supplied software and hardware cradle has an option of USB or seriel although USB is far quicker. The supplied software includes a full version of Outlook 2002 for the PC. The iPaq also comes with a natty little hinged case to protect it. Bad points about it are there are very few peripherals on the market for the 3800 series at present and also there is no software currently available to take

account of the new 65K colours. These no doubt will come soon. I had looked at buying the new Jornada before getting this one but am very glad I waited on the iPaq. Overall excellent design and quality. Highly Recommended.Lots of functionality. Well designed. On the down side The unit I received is a lemon. It has three unrelated issues that Compaq acknowledges as hardware problems. This is a LOT of HW problems for a single unit! Compaqs support has been unusually poor. In their first reply to my email, they sent a generic answer saying that I should reset my unit. They apparently did not even read my description of the problem I was encountering because at the very beginning, I had already said that I had tried resetting several times. In their second reply, the directed me to call second tier Tech Support in other words, they waste several days of your time with a first tier of support that can only provide precanned answers for assistance. I called the number they specified and waited on the line for over 45 minutes before giving up. Summary Good product if it works. If you get a problem unit, the inconvenience of Compaqs support will make the whole experience negative.After installing of all of my programs and games, I still have lots of storage space.

The brighter screen and all, as well as some features like IPAQ store storing some essentials in ROM make it a great little machine for those who want a lot of things at their fingertips. Full content visible, double tap to read brief content. The color TFT screen produces 4,086 colors, and you can view the screen from many angles and in a variety of lighting situations. The Compaq iPAQ wraps the power of a Microsoft Windows operating system in a new interface designed for ease of use in a portable format. Even if youve never used a computer or digital organizer, learning to use the Compaq iPAQ is easy. Other highlights of the Compaq iPAQ include a microphone and a speaker as well as an audioin jack. It features an infrared port for wireless data transfer. The Compaq iPAQ uses five buttons plus a fiveway joystick. The iPAQ allows you to input data in your own handwriting, by soft keyboard, by voice recorder, or through inking. Both audible and visual alarms alert you when you have a scheduled event. What sets this Pocket PC apart from similar devices on the market is its sleevelike expansionpack system. The expansionpack system allows you add functionality to suit your particular needs. Expansionpack options currently include a CompactFlash pack, the ability to attach a CompactFlash card slot to your iPAQ, an

executive leather and PC Card expansion pack, and a waterresistant sports pack. In the future, Compaq plans to release a global positioning system pack, so you can make your iPAQ pocket PC into a GPS unit. The Compaq iPAQ is sporty and small. At 5.11 by 3.28 by 0.

62 inches and 6 ounces, it fits in your hand or slides into your pocket with ease. Dont let the size fool you into thinking you dont get many applications with your iPAQ. You receive a great deal of Microsoft software, such as Pocket versions of Word, Excel, Internet Explorer, and Outlook as well as the full desktop version of Outlook 2000. Compaq has also built in utilities so that frequent actionssuch as switching between tasks, adjusting volume, or changing backlightingare only a click away. Darrel Rhea 5.0 out of 5 stars My Palm V has been great and I have been loyal to Palm for a couple of years, but this machine represents a quantum leap in capabilties. It has a great screen, making reading everything easier for me. I love the MP3 player, and having my favorite photos to show off. Reading books actually works for me on this and it didnt on my laptop and emails and word documents are a snap. I print pretty well anyway, so handwriting recognition is about 95% .After all of the raving, I do have to say that this is a complex device that takes some effort to master. I crashed 4 times working out how to transfer MP3s and JPEGs in one day I have never crashed a Palm. That said, it does work extremely well. Just be ready to invest time to learn it. I expect that Compaq will improve this in the coming weeks. Activesync was not included, so be ready to download this from the net if you want to sync with Outlook. Id recommend this product. Its very fun.For example, You press in the corner and hold your finger there, then the screen will just draw random lines and shapes all over.

But Was useful to listen to music, pictures, basic web surf and email, Map apps, and money tracking appsI bought it primarily for trying out the programs I hope to write, and were testing via the emulators that Microsoft makes available for VS2005 and VS2008. The battery life is my only complaint.I hope we can figure out what is wrong, why it wont sync, then I will return and give a better.hopefully.review of this ipaqIn regards to any Palm device, there is simply no comparison. Heres why The number of useful applications is far beyond what the Palm offers. I downloaded a 2,000 row excel spreadhsheet into the iPAQ and it handled it quickly and perfectly. The speed is LIGHTNING fast. The response is instantaneous for most actions. The useability of Outlook is much better than the Palm PIM manager. It is faster, better looking, and the instant and automatic keyboard appearance when name searching is fabulous! The synching feature is better and faster than the one on my Palm. Once you place a file in the synch directory, it will always keep it synched with the one on your desktop. This is most important with documents like excel files that are constantly changing.You can also customize the synching to be automatic or manual, and it reads changes to synched files a few seconds after they occur. The Reader application is great. I just wish there were more titles than old fiction classics to select from. Applications software loading is far easier then on the Palm OS. On the Palm, you have to jack around with finding the right location to put a file so it will synch. On the iPAQ, you load the application from your PC like any other software program and it loads immediately on the iPAQ without any file placement games. The game capability is terrific due to the excellent color screen and some good game applications. Some of the games that come on the unit on the free expansion package are superior pacman and the cubicle game. The Jornada is far heavier by 3 oz.

The future expandability of this thing is mindboggling. Modem, wireless RF, and vast additional storage is available now, and other remarkable inventions such as GPS will be available soon I think. Compaq support has been excellent. It also helps when your laptop is a Compaq as well heh heh. I

feel that the iPAQ will replace my PC in the near future for a lot of what I do, once additional hardware, modem, etc. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with Ipaq Manual. They dropped the backup one here, so if you ever lose batttery life on a trip, or even just sitting in a drawer unused for a few weeks, it loses all memory, goes dead, and you have to completely restore everything from a backup! I dont know if HP has any better like the old style! models, but until they do I wont get another one from them. It allows a wide verity of uses. Spreadsheets Excel and Word Documents can be modified or created on the PPC and then placed on your desktop or laptop. There are also Adobe files and MS Media Player files that can be viewed on the go. This gives the user the convenience of having a computer in remote locations that a desktop could not be used in and a laptop would be awkward to use. With the SD memory card the majority of restrictions on memory are removed. The iPAQ also does not require a large operating knowledge of computer systems to be able to use it. What ever you can do on a desktop system, the iPAQ can do the 99.9% of the same functions on the go. I do not use the iPAQ for videos in Windows Media Player. Media Player cannot handle top end graphics without modifications to the iPAQ. Just like a desktop, you can upgrade the iPAQ to what you need.

One thing that I really like is that the 3835 is old enough that most of the upgrade programs are free or very low cost. On the other hand, new programs are still being written for the 3835, which gives it a nice comfortable operating zone. Most accessories are inexpensive and still easy to obtain. It provides a perfect tool for keeping appointments and writing quick notes as well as easy access to important phone numbers and adresses. You also can store and play your favorite music and it has a built in recorder for people with short memories. The color LCD is great for playing games and you can also download games from the internet. The Ipaq can also be syncronized with your home PC or Laptop to give even more options. Great for traveling and reminding you of stuff. Now if they could do an upgrade on the psp, that rocks so much, and combine the handwriting recognition and other features of a pda with the gaming and multimedia of a psp that would be one sweeeeeeeeeeeeeeeeeet package.
